Module Versions

This version of the CTX-Azure deployment plan is relevant up to version 1.0 of the CTX-Azure module.

Preface

About this Manual

This document provides a guide on how to deploy the CTX-Azure module in your Cortex System.

Audience

This document is intended for those who require the use of the CTX-Azure module.

None

1 Requirements

This document details all the steps required to deploy the CTX-Azure module.

Requirements:

- Remote Desktop Access to the Cortex Server
- Cortex v6.3 Installed on the Cortex Server

2   Import CTX-Azure

To deploy the CTX-Azure module on your Cortex system, the CTX-Azure Studio Package needs to be imported on your Cortex system. To do this:

- Download the CTX-Azure Studio Package

- Import the Studio Package in Cortex Gateway

- Ensure the relevant users have the required permissions in 'Studio Authorisation'

After this, all users in the authorised groups will be able to view and execute the subtasks.

Before the subtasks can be used there is need to create and configure an 'Azure Active Directory Application' with the necessary rights. Details of how this is done can be found in the CTX-Azure - User Guide.
